

Lodge that relativity may explain the negative results of the ether-seeking experiments (up to his time of course) but that it doesn't appeal to common sense. Let's say you have a rigid iron rod, one light year long. You turn one end and according to relativity it would take one year for the other end to turn, but if such an experiment could be set up (which is the problem with most of theoretical physics -- the concepts cannot be tested in the real physical world of sensation in which we live) you would probably find that the other end would turn simultaneously, just as common sense would indicate.

As far as the qualities of the ether I would suggest to you as a serious researcher to find out what they are -- you are missing one of the great pillars of thought in this realm. Recommended reading on the subject is *The Etheric Formative Forces in Cosmos Earth and Man* by Guenther Wachsmuth, which we reprinted, like Krafft's works, for those interested in keeping no stone unturned in their search for an understanding of the finer forces of the universe. Other books available which describe a non-reductionist approach to the ether are *Toward a Phenomenology of the Etheric* edited by Jochen Bockemuel, *Physical and Etherial Spaces* by George Adams, *Projective Geometry* by Olive Whicher, *Man or Matter* by Ernst Lehrs, *The Cosmic Pulse of Life* by Trevor Constable, and *Metal Power* by Alison Davidson, all available from BSRF.

The qualities of life, light and warmth are more than mere physical measurement -- they touch upon our spirit. And spirit is completely absent from your entire viewpoint -- yet it propels you to discover what is happening. There are definite spiritual qualities to this universe -- completely interwoven with the physical matter we are comprised of. This has always been -- from the very beginnings of Borderland in 1945 -- of primary interest to us. The ether is comprehended as the final formative stages of the universal intelligence (or spirit) on its path to matter. Physical scientists -- for the most part -- seem to reject this concept out of hand, and that will not stop us from reaching beyond the physical to the ultimate energies of the universe. Ether theories have already been thrown on the dung heap -- Wilhelm Reich died in a U.S. prison for refusing to stop his scientific experimentation of living etheric energy. The historical demise of ether theories has more to do with the disappearances of books on the subject from universities and libraries and a concerted effort by those with the means to stop people from considering a universal energy which Tesla described as a source of ultimate free power. And as far as math is concerned it is a very useful tool in many circumstances,

yet it is quite obvious that the force that animates scientists is absent from their equations! When you can convince *both* mystics and physicists then you are making serious headway in the Borderlands...

ORANUR REPORT

Dear Peter Lindemann,

In the July-August 92 JBR Fizix Korner you presented an excellent account of your experiences with what you call ORANUR (I call it DOR but that is just a semantic note), and your discovery of how to clear it out of an area using electronic instruments. It is an excellent article and I congratulate you for it.

However, in the piece you stated TWICE that Dr. Reich had never figured out how to get rid of it -- how to clean an area. I beg to differ with you on this point. I was Dr. Reich's research associate at the time and he *did* find a way to bring the levels down to tolerable limits. I am attaching an account of just how this was accomplished. We never did clear it out completely -- for example -- the building rocks of the observatory were heavily infested -- suffused -- with the very noxious MELANOR and we never got to attend to clearing them up. But we did make the buildings habitable for ORANUR seasoned personnel.

Again -- Thanks for your excellent, insightful report.

Bob McCullough
Horseshoe Bend, Arkansas

Sequence of Events Leading to the Chemical Removal of ORANUR (DOR) from Infested Buildings at Orgonon, Rangeley, Maine:

For some time following the ORANUR Experiment, the Observatory at Orgonon was almost totally uninhabitable. One could only remain in it for no more than 10 or 15 minutes on good sunny days, and on stormy DORish days one could hardly enter the building. At the doorway, one was immediately *hit* by an all encompassing pressure from all sides, sharp and heavy headaches, palpitations, extreme flushing, etc.

One afternoon, Dr. Reich placed a large bluish glass ashtray on the top of the tank of a toilet in the center of the main floor of the observatory. We put some water in it and a stick of sodium hydroxide (NaOH) -- lye. I can't recall him ever saying just why he did this (then or later). The following morning on our daily check we were amazed to see that the NaOH solution had climbed up the sides of the glass, over the rim, down to the tank top and over it to the edge and

even continued on the floor! We were very amazed -- I was flabbergasted. It was a very impressive sight. But the atmosphere in the building did not seem as oppressive as usual. We decided to verify this observation.

So we put out several unglazed ceramic (dinner) plates on the tables and lab benches. We added water and NaOH sticks (the size and shape of school chalk). The next morning all the plates had incrustations of a moist chalky material around the edges. None of the material however, extended beyond the plates -- the ashtray event was unique. The inflorescence was moist and under a microscope was very alive looking (E_L). The plates were allowed to dry out -- the incrustations also died and under the microscope showed black and full of T-bacilli. The dried plates had to be remoistened or removed from the area to continue the clearing. The dried plates were quite noxious.

The oppressively charged atmosphere of the observatory cleared up dramatically and it became possible to work in it again for extended periods.

Later we tried using other solutions in the plates. Most bases seemed to work well -- but none as well as NaOH. Acids either had no effect or were even negative in their reaction. Surprisingly sodium chloride (NaCl), table salt, worked quite well and it was used in further development of the process.

Why did this work? We did not know for certain. Dr. Reich speculated that the heavy concentration of DOR was of such a dehydrating nature that it acted as would a herd of extremely thirsty cattle coming into a water hole. Pure water would not do it -- but these basic solutions did the job. But this was pure speculation -- we never did find out the why.

After clearing out the noxious atmosphere of the observatory, we similarly cleaned the student's laboratory and other buildings at Orgonon. We never did clean them completely, but did reduce the contamination to tolerable levels except on the worst days.

Peter's response:

Thank you very much for your kind letter of acknowledgment and recognition concerning my recent Fizix Korner column in the *Journal of Borderland Research*. While the article caused a small storm of response, no letter I received was more enlightening than yours. Thank you for restating Dr. Reich's procedures for cleaning DOR infested build-

ings. While I vaguely remember reading of this procedure, I guess it didn't leave a deep impression in my memory because it was not a complete cure for the problem.

In contrast to Dr. Reich's chemical methods, the **SpaceCrafter** and **Radiation Rectifier** devices completely clears and neutralizes 100% of the DOR and Oranur infestations with a single pass until acted upon by another disruptive source. Reich did not have this level of success, by your own admission, and this is why I stated it as such in my article. Dr. Reich was a great genius and I have no doubt that he would have solved these problems completely had he lived. I want you to know that I have only the deepest respect for Dr. Reich and any of his associates (including you, sir) who participated in those very important discoveries.

This brings me to something in your letter that troubled me. You state that what I call Oranur you call DOR and that the difference is just a semantic one. With all due respect, I could not disagree with you more. My understanding is that DOR and Oranur are definitely two separate and distinct qualities of Orgone and their differences are important to enumerate. First and foremost is the fact that Reich never gave any of his discoveries more than one name each. Without presuming to do anything other than refresh your memory, my understanding of these matters is as follows.

DOR was discovered as an outgrowth of Reich's early work in character analysis, but it was the Oranur Experiment that provided large quantities of DOR in the open environment for him to study. As viewed in the open atmosphere, DOR appears as black energy particles moving around where as healthy Orgone appears as white energy particles. In high enough concentrations, DOR precipitates into the physical as a non-elemental form of matter called Melanor, which is a black powder. Thus, in all of its forms, DOR is black and totally non-luminous. Also, DOR is contained and segregated from healthy Orgone by the process of sequestration. DOR is formed under a wide variety of circumstances that inhibit the natural pulsatory behavior of the Orgone, such as blocked orgasms or unexpressed rage.

Oranur, on the other hand, is a chain-reaction in the Orgone Energy field. In high concentrations it illuminates as a reddish-purple color, otherwise it is invisible and it never precipitates as visible matter. Healthy Orgone cannot contain or sequester Oranur and is quite often infected and transformed into it. Oranur is formed as a specific response of the Orgone to the action of nuclear decaying material and never forms spontaneously as a by-product of a disturbed character struc-

ture.

While there are other differences between DOR and Oranur that I know of, those mentioned are enough to make my point. While Reich's writings make these distinctions plain, to most it may seem like knick-picking at the fringe of a totally obscure topic. For the purposes of clarity, however, the differences are important. I am grateful to you for bringing to my attention the fact that the distinctions between DOR and Oranur are not always clear even to seasoned researchers.

In my article, I describe DOR as patterns within the Life Force that are destructive to living processes while I describe Oranur as a condition in which the Life Force has lost its ability to be patterned at all. This simplified description of the character of these two deadly forms of Orgone energy is an attempt to make a very complex topic a little more understandable to the average reader. I hope that my introduction of the concept of "patternability" helps to clarify the differences between DOR and Oranur.

Your description of Reich's chemical methods of DOR clearing is very instructive and I am sure the BSRF Associates will appreciate the information. So, if you have anything to add to all of this, send it in and we'll be happy to include anything more you care to submit.

Thank you, again, for your kind letter and may God bless you.

Sincerely yours,
Peter A. Lindemann
Fizix Korner

THE RIFE WAY

The gentleman who introduced my partner and I to the Rife technology was visited three times by the F.D.A. in March 92. Our research was already at a crawl, but this put every piece of equipment in hiding. In the meantime I've been given a diathermy machine, which is probably against the law for me to plug in the wall. My goal is to get this diathermy machine to resonate or explode microbes through the air under the microscope and on video. I plan on placing gated audio range square waves on the 27MHz that diathermy units put out. The units have what looks like a "ray tube". Diathermy machines were popular in the 70's for physical therapy. They heat muscle tissue. The insurance costs on diathermy machines has taken them more or less off the market. Anyone who has schematic plans or any paperwork on a Burdick M.W. 200, please photocopy and send on. I'll keep you all posted on my research through the Journal.

MWO CORNER

First of all I would like to say how much I enjoy *The Journal of Borderland Research*.

There have been a number of articles in your publication concerning Multi-Wave Oscillators. There is some question as to how effective is the modern MWO such as built by Super Science, Dayton, Ohio.

The following are the results I have obtained with the Super Science unit: Tension headaches (100% effective), Hay Fever (95% effective), Arthritis (95% effective), Leg Cramps (100% effective), Poor Leg Circulation (100% effective), Early Stages of Stomach Cancer (100% effective), and Conjunctivitis (100% effective).

The Super Science MWO may not be built along the lines of a Lakhovsky MWO, but it works! It's not how it's built, but the "end results" that count!

The Super Science MWO is a quality built unit and anyone who would like to write or telephone me please feel free to do so.

Yours truly,
Winston Gandy, Jr. D.D.

Darlington, S.C. 29540
(803) 393-6239

Thank you for your report. We encourage all others using "borderland" type devices to tell us of their experiences. The research protocol used in gaining the above percentages would be most useful, and of course would be necessary for scientific verification. Were these conditions verified via medical diagnosis before and after treatments? What were treatment times and how were results measured? In the instruction for his equipment Klark asks users to keep accurate records. This information is very important for future research. Please read on....

TEST RESULTS OF THE ELECTROSTATIC MWO

I have just completed a three-month research project with the Electrostatic MWO designed by Peter Lindemann. Being a researcher of subtle energy devices and a connoisseur of altered states of consciousness, I am very pleased with this exceptional instrument. The Electrostatic MWO is unique in many ways. First of all, it uses *no* high voltage. Its only electrical power is 110 volts used to drive or pulse the antenna. Secondly, it does not create TV interfer-
